**News 03/2022 - Logic**

*New features in the HCC logic module with version 4.3.0*

Logic modules can now be directly connected to each other

- ➢ Implementation of complex logic is simplified

- ➢ No more need to save intermediate results in variables

- ➢ Fewer "virtual data points" are needed

- ➢ Time saving in the creation of complex logic

Logic block „Split"

The "split" module reflects its binary or analogue input value up to three outputs.

Logic block „Merge"

The „Merge" module always provides the most current of the up to three binary or analogue input values at its output.
